

- Direct connection up to 690V line voltage, up to 6,6kV with HV adapter
- Monitoring during both live and standby conditions
- For use in land, marine, offshore, sub-sea and ocean floor installations
- Complies with IMCA D 045 Code of Practice
- "Megger" - safe to 1.4kVDC when aux power is OFF
- Immune to earth capacitance and voltage surges
- Analogue output proportional to meter reading (F-version)

Specifications

Auxiliary Supply:	100-120, 200-240, 380-415 or 440-460VAC, 40-70Hz (Fuse 0.5A)
Optional Voltage:	12-24, 48 or 110VDC (Fuse 2A)
Supply tolerance:	± 10%
Power rating:	1,5VA
Contact rating:	AC: 100VA - 250V/2A max. DC: 50W - 100V/1A max.
Analogue Output:	Up to 20mA, max 500R
F-versions	Up to 10V, min 100kohm (other on request)
Temperature:	-20 to +70°C
Weight:	0.85kgs
Front protection:	IP52 (IP65 optional)

Application

The digitally controlled KPM163x series monitors insulation level between a non-grounded (IT) AC mains and its protective earth, regardless of whether the mains is live or non-live (standby). The unit is for land, marine, offshore, sub-sea and ocean floor use.

An AC or DC auxiliary voltage is required for the unit, if powered from a separate source the network can also be monitored during standby conditions. Only **ONE** KPM163x can be connected to each IT-system. The ohmmeter and the triple-zone status LEDs give at a glance the clear safety message:

- ALARM (red zone)
- WARNING (yellow zone)
- HEALTHY (green zone)

INTELLIGENT SETTING ASSISTANCE

KPM163x has a built-in Assistance tool for setting/verification of the trip levels and the analogue output.

When either the **Warning** or **Alarm** potmeter on the rear is operated by user, the meter goes into **Assistance Mode** and meter reading and analogue output will reflect the potmeter setting (the blue LED will be lit in this mode).

How to set alarm levels:

Firstly adjust potmeter fully clockwise (see that meter goes to the top), then adjust potmeter down to required **Warning** or **Alarm** setpoint.

How to test analogue output signal:

Adjust any trip level potmeter to activate Assistance Mode. **Example:** On a 4-20mA output, adjust potmeter fully anti clockwise for 4mA and fully clockwise for 20mA.

The KPM163x range is designed to comply with specification IMCAD 045 "Code of Practice for the Safe Use of Electricity Under Water" issued by IMCA.

The unit meets EN 61010-1 Cat. III, Pollution degree 2 and the relevant environmental and EMC tests specified in EN 61326-2-4 to comply with the requirements of the major Classification Societies.

General

IDV MEASURING PRINCIPLE

Insulation is measured between the complete galvanically interconnected AC network and its protective earth.

The unit injects a DC voltage signal into the monitored system. The signal flows to ground via the path of the insulation fault, the level of flow indicates the insulation resistance. The measuring accuracy is not influenced by any normal kind of load attached to the AC network.

Trip levels and delays are settable on unit rear. A trip LED flashes when the trip level is passed, the relay trips when the delay has elapsed. The timer resets if the fault is removed during countdown.

MEGGER SAFE

When auxiliary power is **OFF** the unit input is automatically protected against "megger" test voltages up to 1.4kVDC, and incorrect measurements caused by the unit's input impedance are avoided.

OUTPUTS

All F versions have an isolated **analogue output** proportional to meter reading. If output is used for remote meter reading, we recommend 0-1mA for the slave indicator.

SAFETY

When a voltage adapter (CHx or ANx) is used the signal to terminals 4 and 6 on KPM163x is limited to a safe level, avoiding any dangerous voltage exposure to personnel.

NOTE

Special versions of the KPM163x are available as:

KPM563x series - Insulation Guards with DC detection function, protected against **high-energy** DC voltage imposed on the monitored AC supply.

KPM263x series - Insulation Guards with measuring loop continuity monitoring.

Description

KPM163E & KPM163F - KPM163G & KPM163GF

This unit is used for marine, ROV and offshore installations. Start of monitoring function is delayed when auxiliary power is switched on (default 10 secs delay). The unit has minimum 150 mS detection time for any insulation fault. **(Recommended for thruster standby monitoring)**

Direct connection up to 690V line voltage. Up to 6,6kV via HV adaptor CH163x or AN6,6 series.

Description

KPM163H & KPM163HF - KPM163HG & KPM163HGF

This unit is specifically designed for sub-sea monitoring and includes the advanced **Load Distortion and Earth-capacitance Detector (LDED)**.

The **LDED** function differentiates between a true (resistive) or a false (capacitive) drop in insulation reading, and will maintain reliable and accurate insulation monitoring even if load switching or a major change in load spread capacitance cause meter indication to drop **below** set relay trip levels. This situation may occur due to the latent high RC product at the high end part of the measuring range. The LDED will then momentarily inhibit all monitoring functions, freeze operation of meter, lamp display, alarm relays and analogue output for duration of a monitoring irregularity.

The unit will restore normal operation at the moment meter deflection rises **above** set alarm trip levels. **The LDED function has minimum 1 secs detection time for any insulation fault.**

Direct connection up to 690V line voltage. Up to 6,6kV via HV adaptor CH163x or AN6,6 series.

Range

High Voltage Adaptors up to 6,6kVAC for KPM163x series

- HV Adaptor for AC Insulation Guards
- CH163x series, up to 5000V Line Voltage live or non-live (standby)
- AN6,6 up to 6600V System Voltage live or non-live (Starpoint/Neutral connection only)
- Creates safety barrier from live HT network to LV switchboard
- Limits measuring output signal to safe levels
- No restrictions on distance between adapter and LV switchboard

Voltage Adaptors CH163x series and AN6,6 are used for Insulation Guard KPM163x when the monitored line voltage is higher than 690VAC. These adapters are a passive low-pass filter for use in 50, 60 or 400Hz networks, and are potted in polyurethane.

These units includes high inductance reactance modules, connected in a special configuration to avoid DC saturation. These adapters maintain a high AC suppression of its signal output to very low, safe levels, under all conditions.

Caution

Terminal 1 must be disconnected during "megger" test.

CH163/1,4 up to 1.4kVAC

CH163/3,6 up to 3.6kVAC

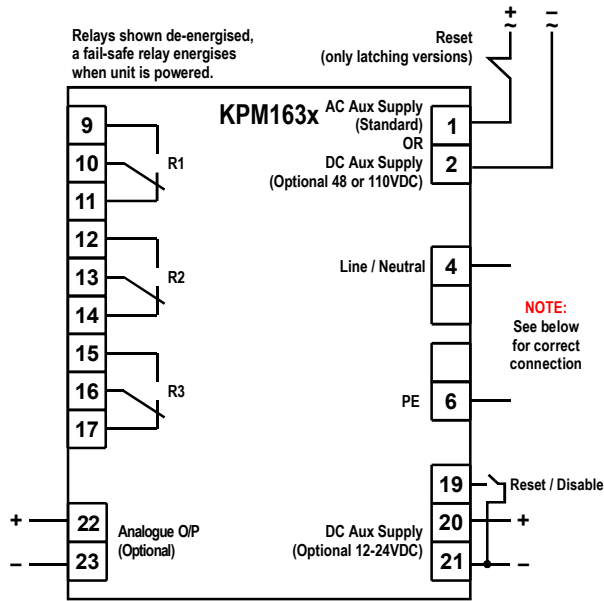

CH163/5 up to 5kVAC

AN6,6 up to 6,6kVAC

The MEGACON policy is one of continuous improvement, consequently equipment supplied may vary in detail from this publication.

Analogue Output

KPM163F, KPM163GF, KPM163F2, KPM163GF2, KPM163HF and KPM163HGF have an analogue output proportional to meter reading. (Special outputs are available on request)

Add suffix from table below to type designation to specify output required:

O/P1	0 - 10mA	O/P6	N/A
O/P2	0 - 20mA	O/P7	N/A
O/P3	4 - 20mA	O/P8	0 - 10VDC
O/P4	N/A	O/P9	N/A
O/P5	N/A	O/P10	N/A

Reset / Paralleling Disable Function

KPM163x has a built-in disable function. When connecting two or more IT-networks together **only one unit** can be active, the other(s) must be disabled. When unit is disabled the power led will flash every 2 seconds to indicate that unit is inactive.

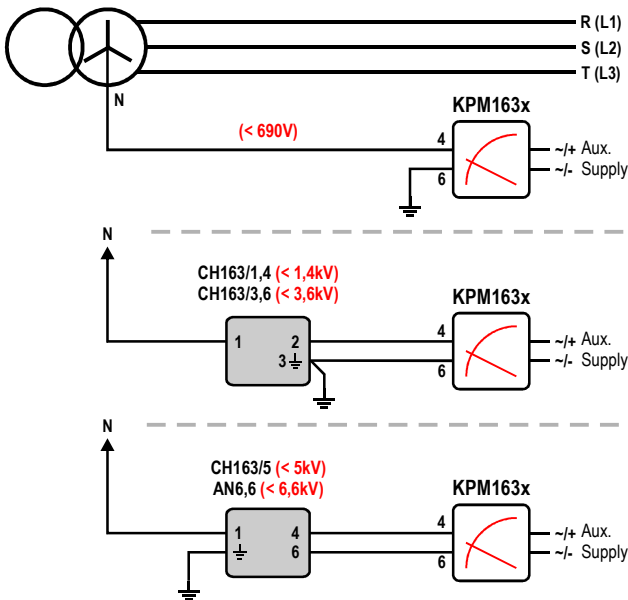

Use a potential free contact on terminal 19 and 21 to activate the disable function (after 2 secs). When activated the measuring input terminal 4 will be internally disconnected.

A pulse (60ms-2 Sec) on terminal 19,21 will only reset any latching alarm.
